

BOLLARD FIXINGS

Concrete Anchor Screws

Description:

Concrete Anchor Screws are heavy-duty fasteners designed for securely fixing objects to concrete, brick, or masonry surfaces. These self-tapping screws provide a strong and stable hold without requiring additional anchors, making them ideal for both indoor and outdoor applications. Their corrosion-resistant coating ensures durability in harsh environments.

Features:

- **High Strength & Durability:** Designed to provide a firm grip in concrete and masonry.
- **Self-Tapping Design:** No need for additional anchors, simplifying installation.
- **Corrosion-Resistant Coating:** Ensures longevity and resistance to rust.
- **Quick & Easy Installation:** Requires only a pilot hole and a drill for secure fixing. Multipurpose Use: Suitable for a variety of applications, including heavy-duty fixtures.

Uses:

- Securing Bike Racks & Parking Fixtures to concrete surfaces.
- Mounting Signs & Safety Barriers in outdoor environments.
- Installing Shelving Units & Brackets on masonry walls.
- Fastening Metal & Wood Frames to concrete foundations.
- Industrial & Commercial Applications where a strong and permanent hold is required.

Specifications:

Material	Length	Height	Width	Weight	Finish	Installation
High-strength steel with corrosion-resistant coating	12mm	75mm	5mm	0.05 Kilograms
