

WHEEL STOP FIXINGS

Concrete Anchor Screws

Description:

The Concrete Anchor Screws are high-strength fasteners designed for securely anchoring wheel stops, speed humps, and other traffic management devices to concrete surfaces. Made from durable, corrosion-resistant steel, these screws provide a strong and reliable hold, ensuring long-term stability in high-traffic areas. Their threaded design allows for easy installation and removal without requiring specialised tools.

Features:

- Threaded design for superior grip and secure installation
- Rust-resistant coating for durability in outdoor environments
- Easy to install with a standard drill and driver bit
- Reusable – can be removed and reinstalled if needed
- Strong holding power for high-traffic areas

Uses:

- Securing wheel stops, speed humps, and traffic management equipment to concrete surfaces
- Providing a stable and long-lasting anchoring solution for commercial and industrial applications
- Used in car parks, warehouses, and roadways
- Ideal for both indoor and outdoor installation

Specifications:

Material	Length	Height	Width	Weight
Galvanised steel for enhanced corrosion resistance	12mm	150mm	0.5mm	0.10 kilograms
