

EXPANSION JOINT FLOOR PLATE/COVER

Description:

The Expansion Joint Floor Plate/Cover is a heavy-duty galvanised steel plate designed to protect and cover expansion joints in concrete floors, warehouses, and industrial facilities. Constructed from 4mm thick galvanised steel, it provides long-lasting durability, corrosion resistance, and structural support in high-traffic environments.

Features:

- Heavy-Duty Construction – Made from 4mm thick galvanised steel for maximum strength and durability.
- Corrosion-Resistant – The galvanised finish ensures long-term protection against rust and wear.
- Slip-Resistant Surface – Designed to enhance safety in high-traffic areas.
- Long Length for Seamless Coverage – At 2400mm in length, it minimises gaps over expansion joints.
- Easy Installation – Can be bolted or welded securely for long-term stability.

Uses:

- Warehouses & Factories – Protects expansion joints from forklift and vehicle traffic.
- Commercial & Industrial Buildings – Covers concrete floor gaps to prevent tripping hazards.
- Parking Garages & Loading Docks – Provides a smooth transition between concrete slabs.
- Retail & Public Spaces – Ensures safe pedestrian movement over expansion joints.

Specifications:

| Material | Length | Height | Width | Weight | Finish |
|------------------|---------|--------|-------|-----------------|---|
| Galvanised Steel | 2400 mm | 4mm | 300mm | 21.50 Kilograms | Rust-resistant, high-durability coating |
