

RUBBER BUNDING

Rubber Bunding - Middle Piece

Description:

The Rubber Bunding - Middle Piece is a heavy-duty containment and traffic management solution designed to control the flow of liquids and prevent spills in industrial and commercial settings. Made from high-quality, durable rubber, it is ideal for creating banded areas in warehouses, factories, and workshops. Its flexible design allows it to withstand vehicle traffic while maintaining structural integrity.

Features:

- Heavy-duty and long-lasting for high-traffic environments
- Resistant to chemicals, oils, and water for industrial use
- Non-slip surface for added safety
- Modular design allows for easy connection with end pieces and additional middle pieces
- Flexible and durable to accommodate forklifts and vehicles

Uses:

- Creating banded areas for spill containment and liquid control
- Used in warehouses, workshops, and factories to contain hazardous substances
- Helps direct traffic flow in industrial environments
- Installed in loading docks, garages, and driveways for vehicle guidance
- Prevents water, oil, and chemical spills from spreading in safety zones

Specifications:

Material	Length	Height	Width	Weight
High-strength, durable plastic	1000mm (1 metre)	40mm	200mm	3.00 kilograms
