

Speed Cushion
EndCaps

Description:

The Speed Cushion – End Caps are essential components of a modular speed cushion system, designed to provide a tapered finish to the middle sections. These end caps ensure smooth transition for vehicles while maintaining effective speed reduction. Ideal for roads, car parks, and traffic-calmed zones, they are constructed from durable rubber for long-term performance and safety.

Features:

- Modular Integration:** Specifically designed to pair with middle sections of speed cushions to create a full-width solution.
- Tapered Edges:** Facilitates smoother entry and exit for vehicles, minimizing impact while maintaining speed control.
- Durable Material:** Manufactured from heavy-duty recycled rubber, offering resistance to wear, weather, oil, and uv rays.
- Highly Visible:** May include contrasting colours or reflective elements for better visibility in low-light conditions.
- Low Maintenance:** Long-lasting material that requires minimal upkeep over time. Quick Installation: Pre- drilled holes for straightforward mounting on asphalt or concrete surfaces.

Uses:

- Used in conjunction with middle sections to complete modular speed cushion setups

Specifications:

| Material | Length | Height | Width | Weight | Colour | Mounting |
|-----------------|--------|--------|--------|----------|---|---|
| Recycled rubber | 250 mm | 50mm | 900 mm | 16.35 kg | Typically black (may include yellow or reflective markings) | Pre-drilled fixing holes (bolts may be sold separately) |
