

Speed Cushion MiddleSection

Description:

The Speed Cushion – Middle Section is designed to be part of a modular traffic calming solution, typically used in residential areas, school zones, car parks, and low-speed roads. Engineered to slow down vehicles while allowing emergency and larger vehicles to pass with minimal disruption, this durable rubber section ensures effective speed control and traffic safety.

Features:

- **Durable Construction:** Made from high-quality recycled rubber for strength, weather resistance, and long service life.
- **Modular Design:** Allows for easy installation with other middle and end sections to create a custom-length speed cushion.
- **High Visibility:** Often comes with reflective elements or embedded cat's eyes for enhanced visibility during day and night.
- **Low Maintenance:** Resistant to oils, moisture, UV, and extreme weather conditions, minimizing maintenance requirements.
- **Easy Installation:** Pre-drilled mounting holes for fast setup on asphalt or concrete surfaces.

Uses:

- Suitable for use with compatible end sections to form full-width speed cushions on roads

Specifications:

Material	Length	Height	Width	Weight	Colour	Mounting
Recycled rubber	500 mm	50mm	900 mm	18.90 kg	Typically black (may include yellow or reflective markings)	Pre-drilled holes for bolts (fixings not always included)
